

Data Sheet for Stone Splash Block

We are pleased to offer stone splash blocks, which measure 14" wide, by 24" long. The splash blocks are made of grey concrete and have a smooth finish on all sides, except the bottom or underside of the block. Splash Blocks weigh approximately 33 pounds each.

Stone splash blocks are very functional and help create a visually pleasing method for diverting rain water from foundations and preventing erosion around drainage points. When aligned to your downspout, the stone splash block will keep water away from the foundation while blending with your surrounding landscaping.
